50X1-HUM

COUNTRY	USSR (Gorkiy Oblast, Magadan Oblast)	REPORT	
SUBJECT	1. GAZ Plant and its Automation Section in Gorkiy: 2. SARZ Vehicle Repair Plant in Spornyy:	DATE DISTR.	19 May 1959
		NO. PAGES	1
		REFERENCES	
DATE OF INFO.			50X1-HUM
PLACE & DATE ACQ.			50X1-HUM

SOURCE EVALUATIONS ARE DEFINITIVE. APPRAISAL OF CONTENT IS TENTATIVE.

Two reports on automobile plants

Attachment 1 is a sketchy report on the GAZ Plant in Gorkiy which includes information on the layout of the plant, a very superficial sketch of the plant, some information on the automation section with a sketch, as well as brief descriptions of various automatic devices produced in the section, including an "electric magnet"

Attachment 2

provides general information on the SARZ Vehicle Repair Plant in Spornyy (N 62-21, E 151-06), Magadan Oblast, descriptions of the various plant buildings, and includes a sketch of the plant layout, a sketch showing the three stamps used by the technical control team to stamp semi-finished, finished, and rejected manufactured parts, and a schematic description of the electric section of the plant.

(Note: Washington distribution indicated by "X"; Field distribution by "#".)

INFORMATION REPORT INFORMATION REPORT

CONFIDENTIAL**"S.A.R.Z." VEHICLE REPAIR PLANT**

50X1-HUM

The "S.A.R.Z." (Sporni Auto Repair Zavod) was located in the small town of Spornyy (N 62° 21', E 151° 06'), Magadan oblast, Yagodnyy rayon, 500 meters to the right of the Magadan highway. It was subordinate to the Ministry of Soviet Metals.

50X1-HUM

PRODUCTS

Delco distributor bodies, generator end covers, housings, and coils, induction coils, reflectors, spare parts, gasoline pumps, carburetors and all necessary items for trucks except cylinder blocks, crank shafts, and insulators were manufactured here. These were all about the same sizes as those used in the average ZIL-150 and ZIL-5 trucks.

50X1-HUM

Each section had its technical control team.

The team in the electric section; each had three stamps numbered 1, 2, and 3.

The Plant did not manufacture or repair military equipment.

CONFIDENTIAL

50X1-HUM

(2)

The following is a list of Plant installations and their activities. *See. Sh. 1*

50X1-HUM

CONFIDENTIALNº 1 Gasoline and petroleum tanks which belonged to the main supply

50X1-HUM

dump near the plant and were located in a fenced in area up on a hill 500

meters from the road.

Nº 2 Northern road to MagadanNº 3 Town reservoir which supplied water from the river to the Plant.Nº 4 Electric transformer (another smaller one, was located next to the river, supplied the town).Nº 5 Three-meter high wooden fence supported by concrete columns located three or four meters apart.Nº 6 Tractor Repair Shop.- A two-story brick structure that had a wooden gabled roof covered with sheet metal and insulated with a mixture of sawdust and ashes.

First floor: Tractor repairs.

Second floor: Storeroom for spare parts and offices of the tractor section.

This building used the following machinery which was in good condition:

Lathes

Planes

Milling machines

Drills

Gas and electric welding torches

Tractors were parked in the garage (Nº 12) until they were picked up. This

shop had 150 workers on three shifts; less people worked the night shift.

50X1-HUM

Nº 7 Machine Repair Shop.- A one-story seven or eight-meter high brick**CONFIDENTIAL**

structure that had a wooden gabled roof covered with sheet metal and insu-

~~CONFIDENTIAL~~

lated with a mixture of sawdust and ashes. It repaired machinery for plant's

50X1-HUM

use and had many lathes, milling machines, drills, planes, etc. This shop

50X1-HUM

had 250 workers on three shifts.

Nº 8 Small Smelting Shop.- A one-story 10-meter high brick structure that

had a roof of similar construction to those buildings already mentioned.

Certain places such as smokestacks, were fitted out with sheets of asbestos.

It had five small coke furnaces: four for cast iron and one for cast metal.

Each furnace had a small brick smokestack. Products were transported either by

~~electric~~ carts or small trucks (if they were large) to the different shops.

This shop had 70 or 80 workers.

Nº 9. Small Forge Shop.- was a one-story 10 to 12-meter high structure with

the same characteristics as the other buildings. It forged parts and accessories

for automobiles, trucks, ~~tractors~~ and used the following machinery:

8 Furnaces: six large, two average size

8 Motor powered drop hammers

This shop had 250 employees.

Nº 10. The Tool Shop.- was a one-story structure ~~that~~ that had the same

characteristics as the other buildings. It made tools, die~~s~~stamps, etc. and

had a lot of machinery such as: lathes, milling machines, drill~~s~~, cutter~~s~~,

made in Czecho-Slovakia, ~~Russia~~, ~~Russia~~, etc. This shop had

50X1-HUM

150 workers.

50X1-HUM

Nº 11. Road which ran in front of the main gate ~~between~~ between the main highway

and the northern highway.

50X1-HUM

Nº 12. Garage for trucks and passenger cars.

~~CONFIDENTIAL~~

Nº 13. Offices and Administration.- was a one-story eight to ten-meter high brick [redacted]

structure that had a roof constructed [redacted] the same [redacted] as those of the other
50X1-HUM

buildings.

Nº 14. Main Gate

Nº 15. Main Plant Building.- was a one-story brick 200 X 50 X 15-meter struc-

ture that had a wooden roof covered with sheet metal; it was probably fireproof

and had a basement. It repaired automobiles and was divided into the assembly,

welding, machine, electric, etc. sections. It made all types of necessary

items for trucks, except cylinder blocks, crank shafts, and insulators. There

was a great variety of machinery, part of which was foreign manufactured.

Products and parts manufactured in this building were stored in the basement.

The Electric Section made Delco distributor bodies, generator end covers,

housings, and coils, induction coils, reflectors, spare parts, gasoline

pumps, carburetors, etc. It had the following machinery:

9 Lathes: one measured 2'5 meters and the rest 1'5 meters.

5 Drills

1 Milling machine

This section had 120 workers on two shifts.

[redacted] 50X1-HUM

Nº 16. Guard house

Nº 17. Gasoline dump where the fuel was stored in cans and tanks.

Nº 18. Garage.- was a one-story 60 X 15-meter log structure, stuccoed inside with

[redacted] 50X1-HUM

CONFIDENTIAL

straw and mud that had a wooden roof covered with sheet metal. It was used in winter to ~~777~~ handle minor repairs on trucks.

50X1-HUM

Nº 19. Truck Parking LotNº 20. Dump for storing scrap iron until it ~~went~~ to the foundryNº 21. Laboratory

RAW MATERIALS

The Plant used blocks of ~~the~~ special type of cast iron, steel bars and sheets,

coke, oxygen, oil, gasoline, etc. these materials were 50X1-HUM

all domestic. All products were brought in by truck.

Unused ~~artificial~~ arti- 50X1-HUM

~~cles were not stored~~ because they would have been too much of an expenditure.

WATER SUPPLY

Three kilometers south of the plant there was a system which pumped water

for a tank (supported by piers 20 meters above the ground) located in the northwest corner of the plant grounds.

Water could be obtained from the river even in winter because the strong

current did not permit it to become entirely solid. The Plant heated it

in winter by a system of two pipes located underground on either side of

the main pipe; houses in town used the same system.

POWER

50X1-HUM

(N62-40, E 150-52)

Electricity was supplied by a power plant in Taskan.

50X1-HUM

The plant had two transformer stations: a large one within the premises

and a small one, located 2.5 kilometers south of the plant next to the river.

CONFIDENTIAL 50X1-HUM

they

(6)

50X1-HUM

Average voltage was 220; however, some machines

and motors used 380 volts. Sometimes in winter power was cut off for hours
or even a day at a time.

PACKING

Leftover parts were shipped to other plants in boxes of different sizes

which had the plant name, number, type, and shipping address stamped on them.

TRANSPORTATION

The Plant had no railroad transportation.

? like a road
 There was a road north to Magadan, a main 8-meter dirt highway which went into town and ran alongside the river, and a 6-meter wide dirt road which ran between the other two on the plant's south side. These were open to traffic all year round and were considered adequate.

The Plant had:

40 Trucks among which were:

2 Seven metric-ton three-axle trucks; one ZIL - 150 and the other

ZIL - 5.

1 ZIL - 5 three-ton two-axle truck

3 or 4 Passenger cars used by plant officials

50X1-HUM

STORAGE

The plant did not store many tons of scrap iron

CONFIDENTIAL

CONFIDENTIAL 50X1-HUM

Gasoline and petroleum were stored in 200 liter metal cans located in Building

50X1-HUM

Nº 17.

Each section had a number of firemen who had the necessary equipment such as

fire extinguishers. The only indoor storage area was located in the base-

ment of Building Nº 15.

PRODUCTION FIGURES

the minimum

50X1-HUM

requirement under the Five Year Plan was a complete overhaul of 150 trucks

per month. Material not used that month was stored so that the economists

could figure out the work norm according to the items on hand and the orders

received from other plants.

The expected production norm was unknown

50X1-HUM

WORKING CONDITIONS

The Plant had a 46-hour work week.

The Machine, Forge, and Assembly Sections worked three 8-hour shifts and the

rest of the sections worked two 8-hour shifts; in the latter three or four

workers always stayed on to take care of the machines, furnaces, etc. Each

shift had a half hour break for lunch.

Workers were granted 18-day vacations plus three days extra for working in

the north and 12 more because of the location of the plant in Siberia.

Supervisors and other personnel were granted 48-day vacations which could be

taken at any time of the year.

CONFIDENTIAL

The average wage was 1500 rubles plus a certain percent for years of service.

50X1-HUM

CONFIDENTIAL 50X1-HUM

This was figured on a ten percent basis on every six months but more than

100 percent could not be collected. Sanitary conditions were good.

50X1-HUM

URITY

Wooden barracks about 500 meters south of the plant housed personnel and the fire engines. An unknown number of firemen and guards took turns patrolling the area. In Building № 16 there was a small security force which controlled entrances and assigned stations to the guards. The rest of the ^{security} personnel were stationed at different points inside the premises.

Firemen wore no uniforms and were ordinary workers; they did not carry their firearms but kept them in the barracks. Guards wore soldier's uniforms with red shoulder boards, caps with visors, and high boots; they used either a pistol or a TT revolver using a short nine millimeter shell.

have his (stamped) Every person had to ~~7777777~~ "propusk" at the entrance; a round stamp meant "time of stay unlimited" and a triangular stamp meant "time limited to duration of shift". Only persons with a special mission were allowed in the laboratory; personnel had unlimited access to all other installations.

There were no courses on air attack or air-raid shelters.

50X1-HUM

ORGANIZATION AND PERSONNEL

Approximately 5000 persons worked in the plant i.e. workers, technicians,

firemen, etc. [redacted] the majority were specialists.

50X1-HUM

CONFIDENTIAL

(41)

Some years ago prisoners or convicts from a work camp worked here but at

the time indicated ^(in report) only native Russians were employed.

50X1-HUM

50X1-HUM

DEFICIENCIES, IMPROVEMENTS, AND PROMOTION OF PRODUCTION

No special effort had to be made to fulfill the norm dictated by the Five

Year Plan. [redacted] it was possible to convert this plant to wartime

50X1-HUM

needs but [redacted] know how it could be done nor how long it would take.

50X1-HUM

GAZ IMENI MOLOTOVA PLANT AND ITS AUTOMATION SECTION

1. The plant was known as Gosudarstvennyy avtomobilnyy zavod, GAZ-imeni Molotova. This plant subordinate to the Ministry of Automobile Production Industry (Ministerstvo avtomobilnogo proizvodstva).¹ The plant was located in Gorkiy (N 56-20, E 44-00), somewhere east of the Oka River. Exact location of the plant and the street or streets in the vicinity were unknown.

50X1-HUM

4e The main activity of the Wood-Working Shop involved preparation and finishing of boards for wooden components of trucks and cars. No other production or activities of this shop were known [redacted] following power-operated production equipment observed at this workshop: 50X

50X1-HUM

4 or 5 electrical saws	make or origin unknown
5 or 6 band saws	" " "
5 or 6 circular saws	" " "
4 planning lathes	
4 drilling (boring) lathes	make unknown
1 or 2 automatic hammer lathes	believed to be of Soviet
dyeing, painting, repairing and drying equipment

its own transformer. The type and source of fuel used were unknown. He provided no details on smokestacks. He had observed the power lines but could provide no details. Supply of electricity was adequate with few breakdowns experienced. Voltage used was believed to be 220. Main heat, steam, and power supply installations were believed to be located outside of the plant and serviced the entire area, including the Sotsialisticheskiy gorod (Sotsgorod).

6. [redacted] the 50X1-HUM

Wood-Working Shop operated on an eight-hour daily shift. [redacted]

7. The security system or measures employed at the plant were unknown [redacted] the 50X1-HUM

[redacted] the entrance pass was always retained by the workers. He believed that workers of each shop required different markings on their passes for entry to their work sites. [redacted] 50X1-HUM

8. [redacted]

9. [redacted] the Auto-

mation Section [redacted] already in existence [redacted] was still in process of organization and development. [redacted] the approximate location of the section (see sketch on page 6.) This section consisted of two design groups, the electro-circuit designers and mechanical schemes designers. The electro-circuit design group consisted of seven or eight designers [redacted] the mechanical schemes design group consisted of 18 to 20 Soviets. This section worked during one 50X1-HUM eight-hour daily shift only.

10. [redacted]

[redacted] group of the electro-circuit designers experimented on the design of circuits for a lifting device, called "talkatel", required for an electric cutting ("nozhnitsy") lathe. [redacted] 50X1-HUM

[redacted] the size of the metal to be cut [redacted] two meters wide and one or two centimeters thick. The metal plates were to be cut into halves. During the cutting process, the automatic device worked on by the design group would lift each separate plate and place it in position for consecutive cutting.

[redacted] two or three [redacted] Soviets worked jointly on this device which was completed in four to six weeks and turned over to the plant's chief engineer. 50X1-HUM

11. The other automatic device [redacted] involved an auto- 50X1-HUM

matic placing or picking machine which he termed "ruka". This device, in 50X1-HUM

the form of giant pincers, was designed as a grip (crank handle) able to

lift or place such small items as nuts, bolts, or similar objects. The

final use of this device was unknown [redacted]

practical in the assembly line of automobile motors. Completion of the

design for this device required from six to eight weeks. [redacted]

[redacted] the electric circuits worked on by the design group were to be used for automation of various production lathes at the Molotov plant. 50X1-HUM
